

COOL AIR™ HEAT

DIESEL FUEL TANK GROUP

1000-2000 L (857-1960 L actual)

Our diesel-fired heaters average about 17 hours of run-time from a full tank, which is perfect for a weekend. But when it comes to long-term heating jobs, you don't want to be making fuel runs every few days. With these drop-in fuel tanks, you can run our heaters continuously for as long as you need! We can schedule a re-fueling program for you, too.

Features:

- Multiple sizes from 857-1960 L capacity
- Forklift pockets & lifting eyes for easy placement
- Fuel lines can be run from 25'-100' away
- Built-in fuel gauge to easily track remaining fuel

Applications:

- Construction Sites
- Special Events
- Film Locations

This venue was the perfect space for a weekend event, except for one thing; no heat! The organizers utilized our fuel tank to run the heater all weekend without taking time away from the celebration to re-fuel.

Extra fuel storage can be useful for even longer applications as well, such as this house under construction. We even scheduled biweekly deliveries of diesel to keep the heat flowing.

At this site, a lower level of continuous heat was needed to keep the stucco warm enough to cure. Luckily, the fuel tanks are compatible with our smaller 50 kW heaters, in addition to the larger 117 kW units.

HEAT...IN A HURRY

- Can be lifted by a forklift or a crane when FULL
- Can be transported FULL
- Certified UN 31A and ULC S601-07
- Also meets the requirements of TSSA
- Universal pump installation kit available
- Built tough for the harsh Canadian environment

ROLL IN

Putting these tanks into place is easy with the equipped forklift pockets.

PLUG IN

The simple quick-release hose connections make hookup a snap!

TURN ON

Optionally, a filler nozzle can be attached to dispense diesel fuel from the tank.

We also rent industrial and portable air conditioning units, fans, and industrial strength heating units. Visit www.cool-air.com for our full line of rental equipment.
