

COOL AIR[™] HEAT

FURNACE - DIESEL FIRED

117 kW Campo

If you need major heat, then this is the equipment for you. Well-equipped for remote locations, these units have a large onboard fuel tank and only require a 115 volt power source for the supply fan. Designed to sit outside with the supply air ducted inside, these units can also have the return air ducted from the conditioned space back into the unit allowing for more economical operation.

Features:

- Large scale clean, dry heat
- Industrial grade power burner
- Stainless steel heat exchanger
- Vented combustion gases allow for safe use in confined areas

Applications:

- Temporary Structures
- Film Sets
- Construction Sites

This venue is an older building with insufficient heating and no power options beyond standard 115 volt outlets. Our heater is powerful and simple to operate allowing the host to focus on the event and not on heating equipment.

By placing the supply duct under the roll-up door, we were able to heat this warehouse simply and effectively with virtually no time spent on preparation or installation.

Exterior wall repairs in the winter bring temperature control issues. This diesel heater running on a thermostat maintained conditions that allowed the stucco finish to properly cure.
