

ELECTRICAL VAULT COOLING

Energize your electrical vault months ahead of schedule and get off of your temporary power feed!

Our temporary cooling solutions let your engineer sign off earlier on a temperature-controlled vault, so you can have power before your base building equipment is fully operational.

Simple, cost-effective and reliable. One call is all it takes.

PROBLEM SOLVED.

Water Cooled 10 Ton

This 10 ton water cooled unit is the perfect fit for large scale projects. Construction schedules can be managed to allow proper time for commissioning of the base building system while eliminating the need to delay energizing the electrical vault.

Air Cooled 20 Ton

These air cooled units are designed to sit out in the elements. They can be ducted on both the supply and return air side. Local or wired remote control allow for complete temperature control or simply flat out cooling. A very versatile electrical vault cooling unit.

Air Cooled 10 Ton

This line of units can either be rolled or forklifted into place. Vertical orientation occupies a small footprint and can fit through narrow passages and tucks into often congested job site areas.
