

COOLING SOLUTIONS FOR CONTRACTORS

With over 25 years of experience, Cool Air is well positioned to provide the equipment and expertise required to support the challenges faced by HVAC contractors during their projects. Our skilled technicians deliver, install, and commission our systems with professionalism and efficiency.

Prompt 24/7 emergency response.

REAL COOL. REAL FAST.

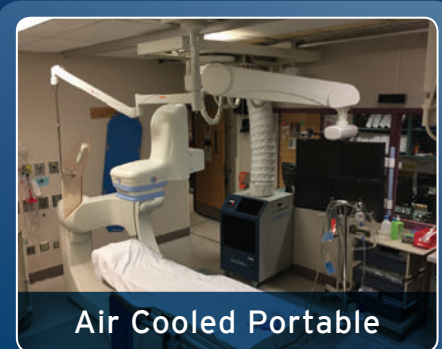

Water Cooled Industrial

This server room required a temporary cooling system while a new system was being installed. We were contracted to provide 15 tons of temporary cooling capacity. This unit held the space at the set point continuously for the 8-week duration of the project.

Air Cooled Chiller

These 60-ton chillers were required to cool this building while the chillers mounted on the rooftop were being replaced. The chiller hoses and the power feed were run up the outside of the building to the rooftop and then tied into the building's chilled water loop. Fencing was later installed to prevent the public from walking into the area.

Air Cooled Portable

The cooling system servicing this lab was being upgraded, and without mechanical cooling, conditions in the room became uncomfortable. We installed this unit after hours, and when the medical team returned in the morning, temperatures inside the space were back to normal.

HEATING SOLUTIONS FOR CONTRACTORS

Heating systems never go down when they aren't needed. Cool Air has a wide range of specialized heating equipment, experienced crews and the know-how to solve complicated temporary or emergency heating applications.

Bring us your problem, we'll work with you to create a solution.

HEAT ... IN A HURRY

Hydronic Tie-in

The boiler for the Amazon Jungle exhibit at the Vancouver Aquarium had reached its life expectancy and needed to be replaced. We supplied a dual 1.2MM BTU hydronic heating package to heat the exhibit's air and water, allowing the contractor the peace of mind to remove the old boiler and install the newly procured boiler package over a ten-week duration.

Electric

This clothing store lost its heating right when it needed it most. Customers weren't staying to shop and the staff were freezing. The contractor provided a simple electrical tie-in, and within a few hours conditions had returned to acceptable levels.

Indirect Fired

This large Calgary furniture store lost all of its heating just as the weather turned cold. The natural gas feed was too far away so the decision was made to use propane instead. We had a display windowpane removed, installed a filler panel, and supplied the store with warm, glorious heat. Once the contractor repaired the boilers, we rolled up our gear and left the site looking like we had never been there.
