

HYDRONIC HEATING SOLUTIONS

Emergency Supplemental Backup

A temporary hydronic heating unit can alleviate the risk of an unreliable boiler. Cool Air will partner with your existing mechanical contractor to provide the safe, reliable, and efficient temporary domestic hot water or radiant heating package that you require until your base building system is repaired.

With over 25 years of experience in delivering reliable, cost-effective applications, contact us to see how simple a Cool Air solution can be!

PROBLEM SOLVED.

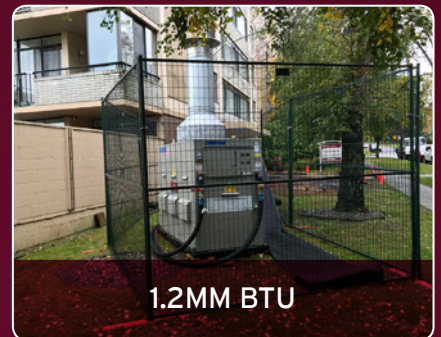

2x 1.2MM BTU

The boiler for the Amazon Jungle exhibit had reached its life expectancy and needed to be replaced. Our temporary 2x 1.2MM BTU hydronic heaters took over heating the air and water for 10 weeks, while the removal and re-installation of the new boilers took place.

250K BTU

This hydronic heater took over the job of keeping ice and snow off the helicopter landing pad of Vancouver General Hospital during a renovation and upgrade project.

1.2MM BTU

This 10-storey residential tower was without heat after a boiler failure. With cooler temperatures on the horizon, building management realized a temporary boiler was required to keep tenants comfortable until the replacement boiler was operational.
