

DATA CENTRE COOLING

Data centres, colocation centres, and server rooms all share one simple trait – they generate impressive amounts of heat that must be managed. Call on Cool Air to deliver an effective solution for your planned and emergency needs any time of day.

PROBLEM SOLVED.

When the roof-mounted chiller in this building required significant servicing, Cool Air was called upon to bring in a temporary chiller to take over the cooling load. Although the rebuild took more than a week to complete, the room was kept consistently cool and operations continued unaffected.

Telecommunication providers are obligated to maintain consistent service levels, not only to their customers but also to regulatory authorities. Failure to do so incurs fines and a tarnished reputation. These sites require large amounts of cooling to stay operational. When temporary cooling is required, be it emergency or planned, Cool Air is the trusted provider.

We deployed our water-cooled units for this server room. This custom-built portable technology is unique. The heat energy is rejected into the building's chilled water loop or domestic water system. These units are extremely effective when the server room or data centre is located deep inside a building.

SIMPLY COOL AIR RENTALS

With over 25 years of experience in delivering cost-effective and reliable solutions, contact us to see how easy a Cool Air Solution can be.

Efficient Systems

- Well-stocked warehouses located in Vancouver, Edmonton, and Calgary.
- From equipment selection to shipping, every detail is planned and co-ordinated.
- Our full line is designed to be packed and shipped at a moment's notice.

Knowledgeable People

- With years of experience facing the challenges of data centre cooling issues, our friendly technicians bring a wealth of industry know-how and a get-it-done attitude.
- Professional and dedicated, the Cool Air team is ready to take care of you.

Reliable Technology

- Cool Air product innovations represent the best that the industry has available.
- Specifically designed and tested to work in stringent IT environments.
- Rugged, portable design and straightforward controls ensure reliable, problem-free operations.
