

ELECTRIC FURNACE SOLUTIONS

Electric furnaces are our green heating solution, providing warm filtered air into workspaces requiring comfortable operating or working conditions. This high-quality clean air can be delivered to your desired temperature setpoints. These efficient units run very quietly without the concerns of refueling, or venting exhaust gases, and are the preferred choice for indoor comfort heating situations.

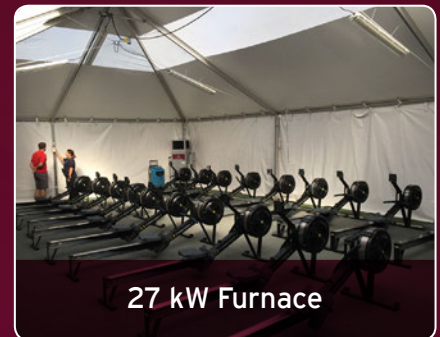

PROBLEM SOLVED.

When this office's heating system broke down, this quiet 27 kW electric furnace provided immediate dry heat that did not disrupt the work performance in the office.

Electric heaters are ideal for retail spaces like these. With the ability to position directly in the room requiring heat, they deliver warmth where it is needed most and without hazardous fumes or refueling concerns.

Temporary structures used during cold weather events are often damp and uncomfortable. These quiet electric furnaces make using these spaces enjoyable and, as in this case, allow athletes to focus on goals rather than distractions from trying to stay warm.
