

INDIRECT FIRED HEATER SOLUTIONS

Indirect fired heaters deliver healthy warm air to your workspaces, without adding moisture or harmful exhaust gases in the process. Indirect fired heaters vent carbon monoxide and other harmful gases up the flue pipe, which provides a separate stream of clean, warm air delivered into your space. This warm, clean, dry air produced will allow your operation to continue in a comfortable environment.

With over 25 years of experience in delivering cost-effective and reliable solutions, contact us to see how simple a Cool Air Solution can be.

PROBLEM SOLVED.

117 kW/400K BTU

This warehouse was designed to store large items in a relatively unheated space; however, when it was converted to a packaging operation, it was far too cold and damp for the staff.

These two indirect fired heaters elevated the work area temperatures until a dedicated system could be designed and installed.

185kW/700K BTU

This large Calgary furniture store lost all of its heating just as the weather turned cold. We had a display windowpane removed, installed a filler panel, and supplied the store with warm glorious heat. Once the contractor repaired the boilers, we rolled up our gear and left the site looking like we had never been there.

185 kW/700K BTU

This public pool and gym facility were undergoing renovations that included upgrading its mechanical systems. The Parks and Recreation board requested solutions to keep the pool operations running. We designed an indirect system that kept the facility warm and comfortable until the new equipment was commissioned and operational. It worked great and nobody even missed a lesson!
