

CONSTRUCTION DRYING SOLUTIONS

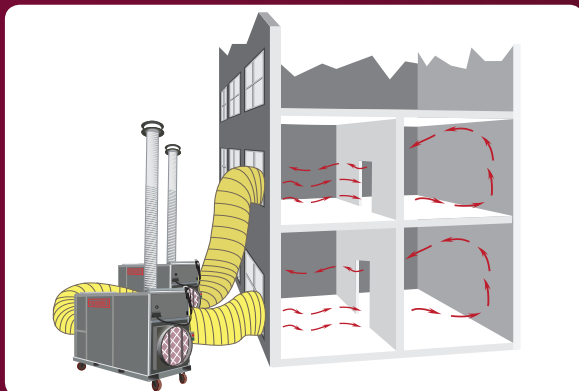

Hydronic Heating

Use our hydronic heater and portable fan coils to effectively deliver and distribute heat throughout your building.

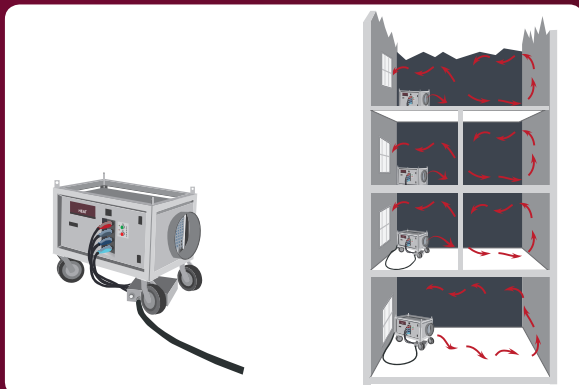

Construction drying is a highly evolved process. A properly designed and managed moisture control plan will provide savings in both money and time.

- Create the ideal drying environment for wood construction materials, drywall mud, and mortar
- Protect sensitive millwork from temperature and humidity fluctuations
- Provide the ideal climate to cure concrete and concrete coatings
- Reduce deficiencies from construction cracks to material shrinkage by having a managed plan
- Establish an optimal work environment and maximize productivity levels.

Indirect Fired Forced Air

Indirect fired heaters keep combustion gases and moisture outdoors and separated from the clean, warm air drying your space.

Electric Furnaces

Higher floors can be heated by these efficient units, and they don't require a fuel source or any venting. Just plug in and heat your space!

LET'S TALK MODERN CONSTRUCTION DRYING

Traditional construction drying techniques represent a false economy in today's construction environment. Our innovative, low footprint heating solutions will dry out your site in a fraction of the time, with less hassle, allowing you to accelerate your construction schedule.

Did you know? Those antiquated direct fired heaters emit massive amounts of toxic combustion gases (CO & CO₂) and moisture into your work site.

Over a 24-hour period a 100,000 BTU direct fired propane heater introduces about 24 gallons, while the 200,000 BTU heater will add a whopping 48 gallons of moisture into the space you are trying to dry.

Just when you are hoping to dry out using direct fired heaters...you are actually **increasing** the moisture content in your space!

UP YOUR CONSTRUCTION DRYING GAME TODAY WITH A COOL AIR SOLUTION

Efficient Systems

- Well-stocked warehouses located in Vancouver, Edmonton and Calgary.
- From equipment selection to shipping, every detail is planned and coordinated. Our gear is ready to roll.

Knowledgeable People

- With years of experience facing the challenges of construction applications, we possess a wealth of industry know-how. We'll fully install, offer orientation and pack it up when you are done. No Sweat.

Reliable Technology

- Cool Air product innovations represent the best that the industry has available.
- Specifically designed and tested to work in a construction environment, ensuring reliable, problem-free operation.
