

COOLING SOLUTIONS FOR EVENTS

Excess heat can turn your carefully planned event into a very uncomfortable ordeal for both you and your clients. With our proven expertise and vast inventory of cooling, heating, and ventilation equipment, Cool Air Rentals can design the ideal equipment package for your special event.

Let us provide you with the best solution possible, while balancing your competing priorities of expectations, budget, space, and power limitations.

REAL COOL. REAL FAST.

Glass-Walled Structure

Hermès set up this large temporary structure in downtown Vancouver to showcase their products and craftsmanship. These units heated and cooled the structure for four weeks. The elevated deck allowed us to duct our conditioned air under the structure and into the space through diffusers we installed in the floor.

VIP Tent

A major part of the Canadian Open Golf Championship is the spectator venues and VIP suites. This glass-walled structure demanded temporary cooling to keep sponsors and clients comfortable during the heat-laden days of summer.

Artist Hang-out

Artist World at Montreal's Osheaga Festival is where the artists hang out before and after their performances. A conditioned tent structure for them to retreat to and recover in is mandatory during August's hot and humid days. This cooling duo of a 10- and 20-ton units ensured the talent stayed happy and ready to entertain.

HEATING SOLUTIONS FOR EVENTS

Cool-weather events should be an enjoyable experience for everyone, and protecting patrons from inclement weather is critical. Keeping your guests warm and dry inside a structure is effortless when the right equipment package is selected. Understanding expectations is key to ensuring an event is enjoyable and well-attended.

HEAT ... IN A HURRY

Winter Festival

This winter event deployed these portable hydronic boilers to heat water that was then circulated through fan coils to ultimately heat the air inside the food tents. This application was quiet, efficient and economical.

Million Dollar Piano

This large art presentation was held inside this temporary structure for five months. Early on, the structure was cooled to achieve a comfortable space for guests. As the sun gave way to cloud and rain, the equipment was switched over to heating because a temperature and humidity balance was required to ensure that the delicate piano wasn't adversely affected.

Fundraiser Dinner

This majestic temporary structure was erected for an evening fundraiser dinner. All of the planning, building and decoration would have been wasted if the guests had been uncomfortable. Our wealth of experience and effective and reliable equipment meant this event came off without a hitch. You only have a short window to ensure success, so deal with the best. You can't afford not to.
