This hospital required supplemental heat to this lobby area and our 9kW heater provided the extra punch they needed. Quiet, reliable and portable, all the elements you require in one neat box.

When the heater in this building was being replaced, our 9 kW portable heater was used to maintain optimal temperatures in the work space. An unused range plug provided the power required and made for a simple and effective solution.

When winter weather arrived the hosts at this restaurant received a blast of cold air every time the front door opened. "Help us!" was the call. We responded with this 9 kW heater that heated a volume of air sufficiently to buffer the Arctic wind.
