

WHY COOL AIR

Cool Air Rentals has been providing consistent, reliable, and efficient solutions for the healthcare industry since 1995. Supported by our in-house technicians and extensive experience, our team will design, deliver, install, and commission our custom systems with professionalism and accuracy.

We understand the sensitive heating and cooling demands of healthcare facilities. When problems arise, a quick response to determine a safe, clean, and consistent solution is necessary to provide comfort and protect vulnerable areas. Our equipment will stabilize temperatures allowing repairs to be completed without disruption to occupants or operations.

OUR COOLING EQUIPMENT

Our cooling equipment is specifically designed to be extremely portable. Simply roll it in, plug it in, and turn it on. With exterior temperatures increasing during summer months; Cool Air can assist in alleviating dangerous interior temperatures not typically seen or managed by permanent HVAC systems.

COOLING CASE STUDIES

LAB COOLING

A major renovation forced the relocation of the cooling equipment at the main VGH lab requiring a temporary solution. Working with the Head of Lab, we installed four 5-ton portable units to maximize cooling, and to ensure there were no tripping hazards, all hoses and electrical wires were suspended from the ceiling grid.

CRITICAL COOLING

Summers are getting warmer and when the heat turns up, dedicated equipment is stressed and fails when it is needed most. We have the knowledge and experience to provide the right solution to fit your individual requirement.

SERVER ROOM COOLING

Server rooms are a key component in healthcare infrastructure and are highly sensitive to overheating, especially when exterior temperatures rise. Cool Air can provide an emergency, temporary solution until the room is stabilized or assist during upgrades to the existing infrastructure.

OUR HEATING EQUIPMENT

Cool Air Rentals can provide heating to a ward, lab, or an entire facility promptly and effectively. Our equipment is easily transportable and will be chosen specifically based on the exact need. When cold temperatures start to affect your facilities operational effectiveness, its time to call the experts.

HEATING CASE STUDIES

LAB HEATING

Testing protocols mandate certain temperature levels be maintained, ensuring lab specimens and results are reliable and accurate. When a failure is experienced, Cool Air is positioned to swiftly remedy the situation.

BOILER FAILURE

Our line of portable hydronic heaters can deliver potable or non-potable hot water to your facility. This Edmonton care facility required four units to keep the residents warm and comfortable as upgrades took place.

WARD/Common Area Heating

We look after public spaces inside hospitals as well. While conditions in these areas are less critical than patient wards, overall hospital well-being is important.
