

WHY COOL AIR

Cool Air Rentals has been providing consistent, reliable, and efficient solutions for property managers since 1995. Supported by our in-house technicians and extensive experience, our team will design, deliver, install, and commission our custom systems. Working directly with end users, or co-ordinating through your mechanical contractor, we will alleviate your temperature control problem with professionalism and efficiency. It's the Cool Air way.

OUR COOLING EQUIPMENT

Custom built in house, our gear is carefully crafted to simply roll in, plug in, turn on. Whether you are looking for industrial air conditioners, portables, chillers, air handlers, pumps, or dehumidifiers, we have it all in any size required and will ensure prompt delivery and setup.

COOLING CASE STUDIES

WATER COOLED INDUSTRIAL

This server room required a 15-ton temporary cooling system while a new unit was being installed. Our equipment held the space at the set point continuously for the 8-week duration of the project.

AIR COOLED CHILLER

While permanent chiller units were being mounted on the rooftop, we installed these 60-ton chillers to provide temporary cooling. The hoses and the power feed were run up the outside of the building and then tied into the building's chilled water loop.

AIR COOLED PORTABLE

The cooling system servicing this lab was being upgraded; we installed this temporary unit after hours, and when the medical team returned in the morning, temperatures inside the space were back to normal.

OUR HEATING EQUIPMENT

Heating systems never go down when they aren't needed. Cool Air has a wide range of specialized heating equipment, experienced crews, and the know-how to address the complicated temporary or emergency heating issues that Property Managers face in their duties.

Bring us your problem, we'll work with you to create a solution.

HEATING CASE STUDIES

HYDRONIC TIE-IN

When the boilers of this residential tower were undergoing a planned replacement, three of our hydronic heaters were called upon to provide comfort heat and domestic hot water for six weeks during installation and testing.

ELECTRIC

This clothing store lost its heating during the coldest time of the year - within a few hours, their electrical contractor had provided a simple electrical tie-in, and our unit shortly after restored the temperature to acceptable levels.

INDIRECT FIRED

The existing heating unit failed in this Calgary furniture store where natural gas was unavailable. We utilized propane as the fuel source providing a safe, effective solution while the contractor repaired the boiler units.
